## WATER LOSS and CONSERVATION

Water Loss in Gallons at 60 p.s.i.

- 1/32" leak - Loss of 6,000 gallons per month
- 1/16" leak - Loss of 25,000 gallons per month
- 1/8" leak - Loss of 100,000 gallons per month

To detect water leaks, it is advisable to periodically check inside and outside faucets for dripping. A slow drip may not seem important, but lack of maintenance may impact your water bills. Please do not leave hose bibs in the on position even if a shut off nozzle is used on an attached hose.

Continuous running toilets consume a large quantity of water if not repaired.

### ***Some ways to conserve water:***

- Replace broken, missing or misaligned sprinkler heads.
- Use a bucket to catch shower warm-up water, and use it to hand-water plants.
- Tell houseguests about the need to conserve water.
- Check all toilets and faucets for leaks. Make appropriate repairs.
- Don't let water run while brushing teeth or washing dishes.
- Wash only full loads in the washing machine and dishwasher.
- Monitor your water bill for unusually high usage.
- Use a broom instead of a hose to clean your driveway and sidewalk.
- Upgrade older toilets with water efficient models.
- Put food coloring in your toilet tank. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it can save up to 1,000 gallons a month.
